## Applied and Action Learning

(Learning by Doing and Discovery)

Name of the Experiment :

### Coding Phase: Pseudo Code / Flow Chart / Algorithm

#### Open Android Studio

- Launch Android Studio and open your project or create a new one.

#### Create or Edit the XML Layout File

- In your project's res/layout folder, create or modify an XML file.
- Add a **RadioGroup** containing multiple **RadioButton** options.
- Add a **Button** that will trigger the Alert Dialog.

#### Go to the Corresponding Activity/Fragment

- Navigate to the .java or .kt file linked to your layout.

#### Initialize UI Components in Code

- Use findViewById() to reference the RadioGroup and Button.

#### Set an OnClickListener for the Button

- Inside the listener, get the selected RadioButton from the RadioGroup.
- Display the selected option in an **Alert Dialog**.

#### Create the AlertDialog Builder

- Instantiate AlertDialog.Builder within the onClick method.
- Set the **title**, **message** (showing the selected option), and **positive/negative buttons** for user interaction.

#### Handle Dialog Button Clicks

- In .setPositiveButton(), define the action (e.g., confirm selection).
- In .setNegativeButton(), define the action (e.g., dismiss the dialog).

#### Show the Dialog

- Call .show() on the AlertDialog.Builder instance to display the dialog.

#### Test the Application

- Build and run your project.

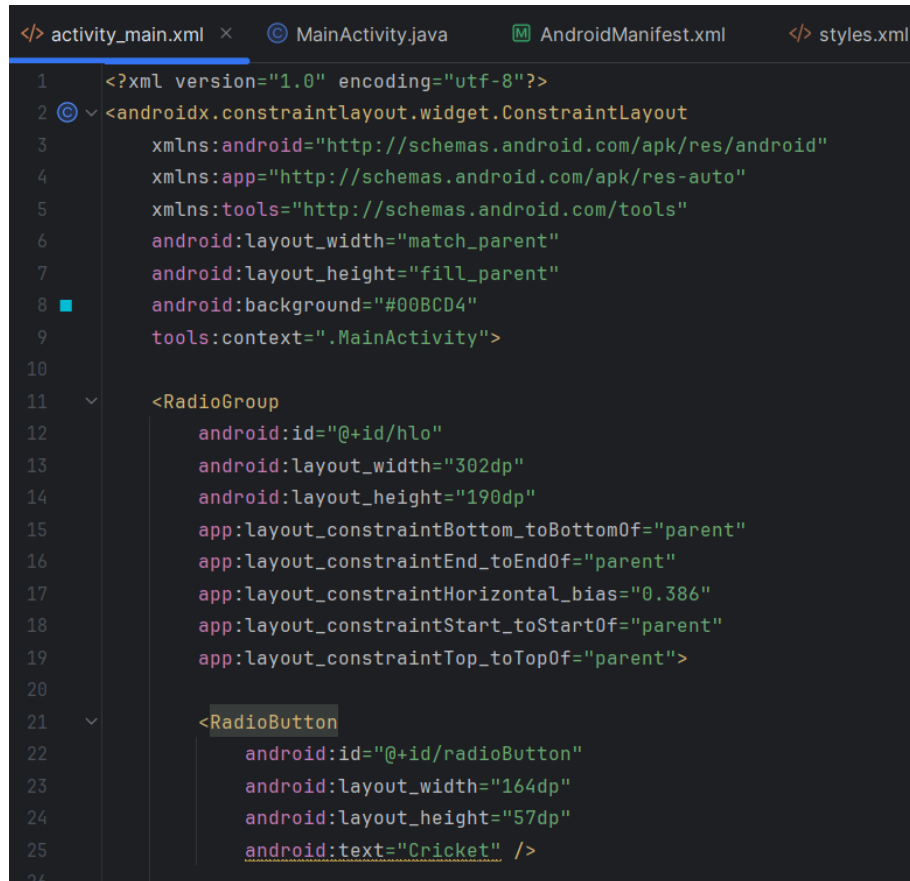

### Testing Phase: Compilation of Code (error detection)

There is no error.

## Implementation Phase: Final Output(no error)

### Step 1: Design the Layout

- Open activity\_main.xml from the res → layout folder.
- Drag a **Button** from the **Palette** to the design view.

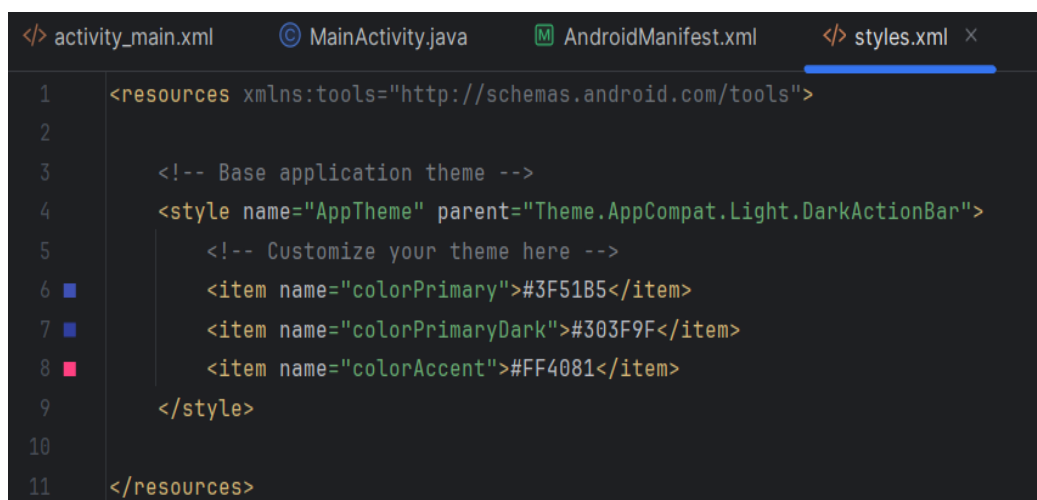

```

1  <?xml version="1.0" encoding="utf-8"?>
2  <androidx.constraintlayout.widget.ConstraintLayout
3      xmlns:android="http://schemas.android.com/apk/res/android"
4      xmlns:app="http://schemas.android.com/apk/res-auto"
5      xmlns:tools="http://schemas.android.com/tools"
6      android:layout_width="match_parent"
7      android:layout_height="fill_parent"
8      android:background="#00BCD4"
9      tools:context=".MainActivity">
10
11      <RadioGroup
12          android:id="@+id/hlo"
13          android:layout_width="302dp"
14          android:layout_height="190dp"
15          app:layout_constraintBottom_toBottomOf="parent"
16          app:layout_constraintEnd_toEndOf="parent"
17          app:layout_constraintHorizontal_bias="0.386"
18          app:layout_constraintStart_toStartOf="parent"
19          app:layout_constraintTop_toTopOf="parent">
20
21          <RadioButton
22              android:id="@+id/radioButton"
23              android:layout_width="164dp"
24              android:layout_height="57dp"
25              android:text="Cricket" />
26

```

### Configuring styles.xml (For Custom Theme/Style)

Location: res → values → styles.xml

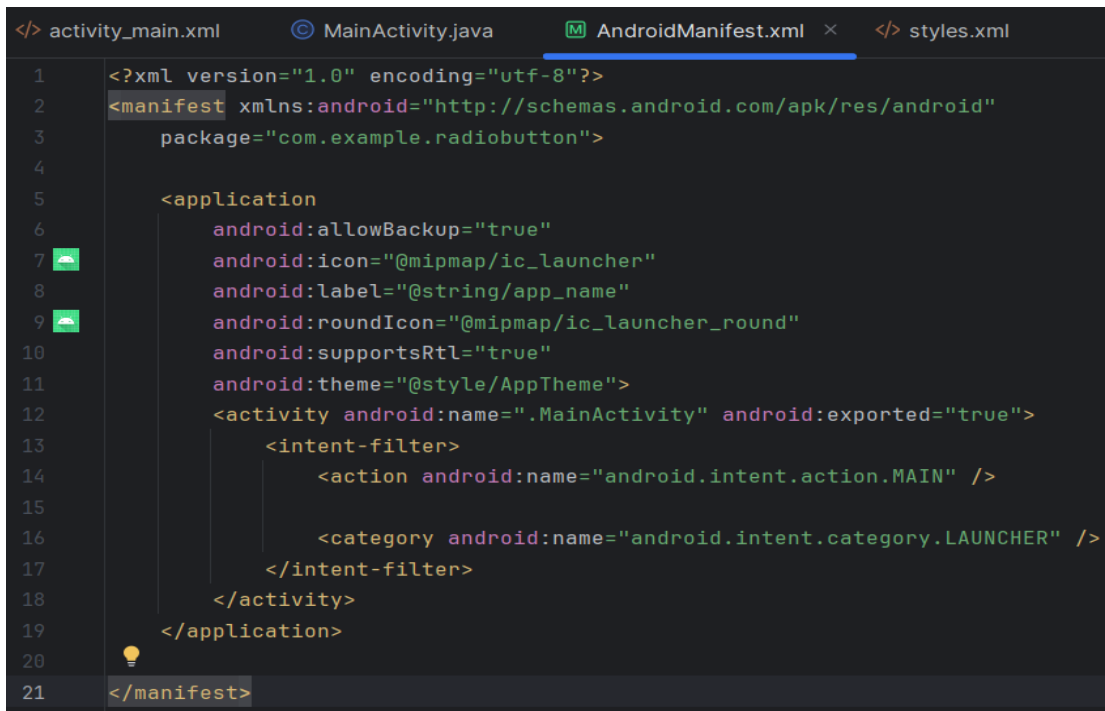

```

1  <resources xmlns:tools="http://schemas.android.com/tools">
2
3      <!-- Base application theme -->
4      <style name="AppTheme" parent="Theme.AppCompat.Light.DarkActionBar">
5          <!-- Customize your theme here -->
6          <item name="colorPrimary">#3F51B5</item>
7          <item name="colorPrimaryDark">#303F9F</item>
8          <item name="colorAccent">#FF4081</item>
9      </style>
10
11 </resources>

```

## Implementation Phase: Final Output(no error)

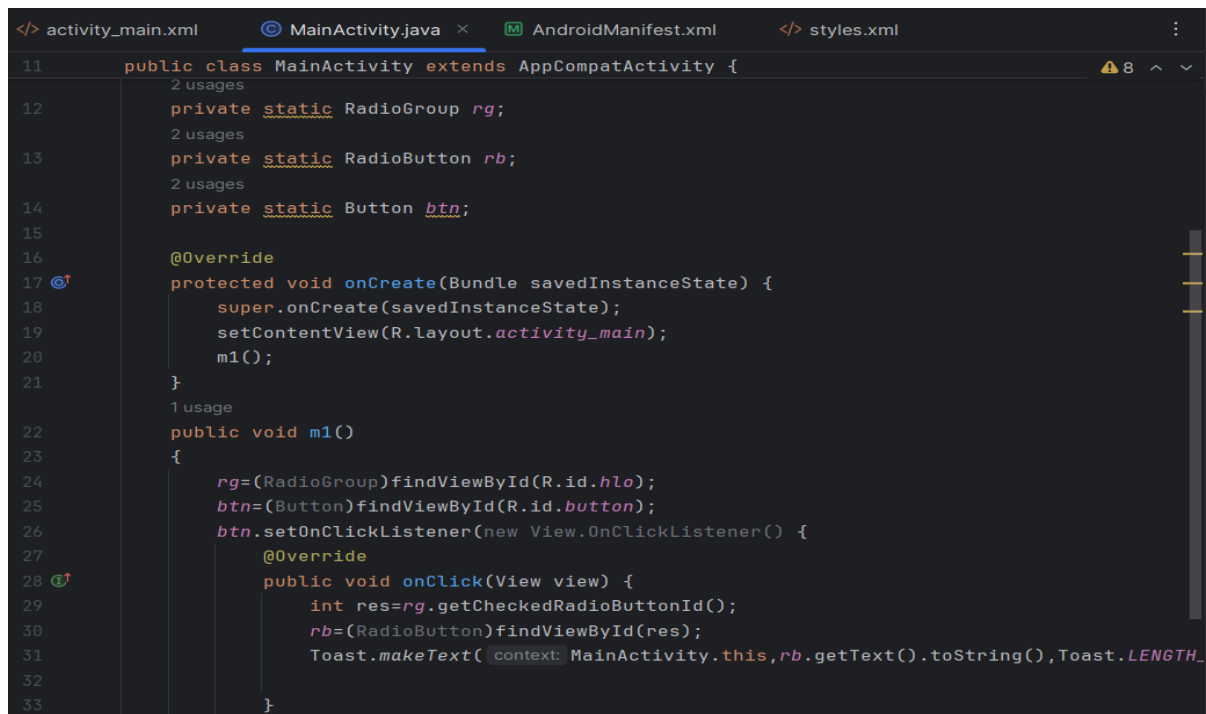

Open AndroidManifest.xml in the app → src → main folder.  
add android:exported="true" to the activity tag with an intent filter.

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.example.button"

    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportRtl="true"
        android:theme="@style/AppTheme"
        <activity android:name=".MainActivity" android:exported="true">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>
</manifest>
```

### Configuring MainActivity.java

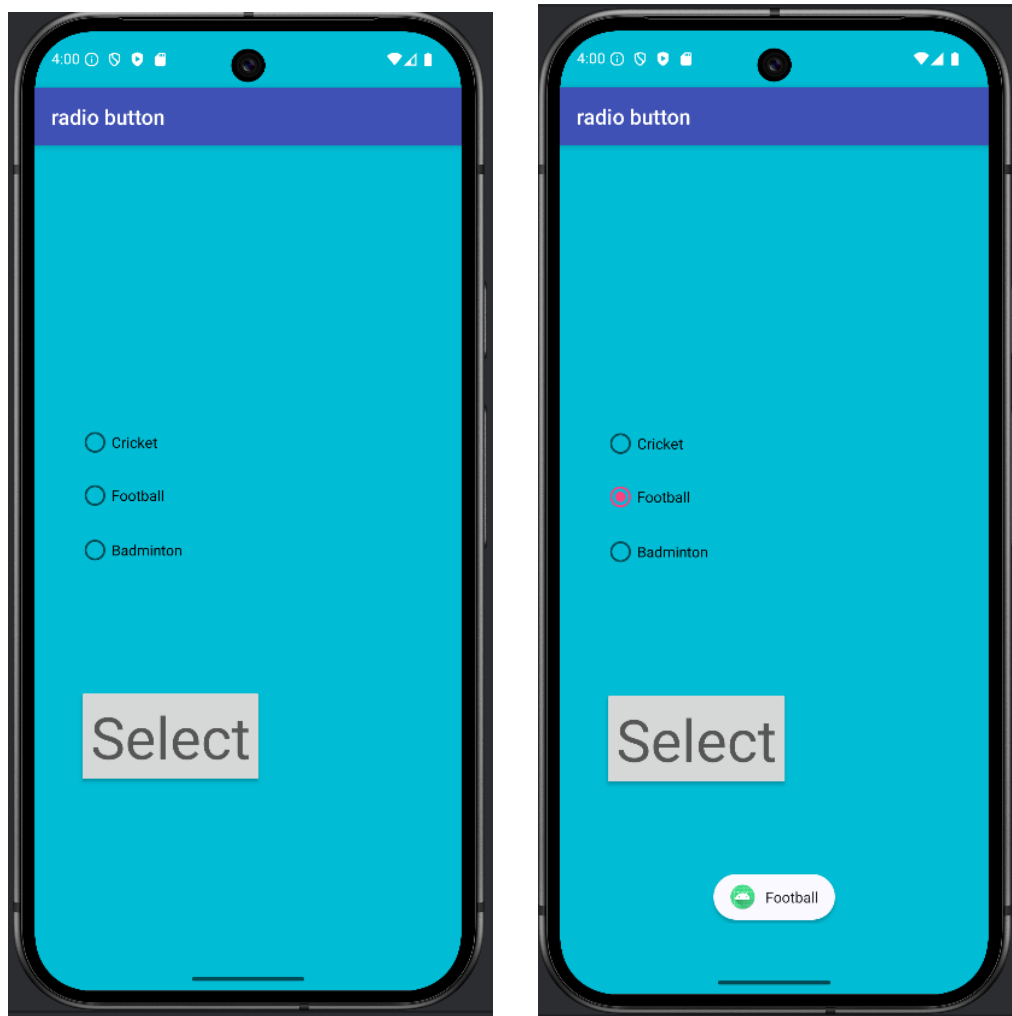

```
public class MainActivity extends AppCompatActivity {
    private static RadioGroup rg;
    private static RadioButton rb;
    private static Button btn;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        m1();
    }

    public void m1() {
        rg=(RadioGroup)findViewById(R.id.hlo);
        btn=(Button)findViewById(R.id.button);
        btn.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View view) {
                int res=rg.getCheckedRadioButtonId();
                rb=(RadioButton)findViewById(res);
                Toast.makeText(context, MainActivity.this,rb.getText().toString(),Toast.LENGTH_
            }
        });
    }
}
```

Click Run .

## ASSESSMENT

Rubrics	Full Mark	Marks Obtained	Remarks
Concept	10		
Planning and Execution/ Practical Simulation/ Programming	10		
Result and Interpretation	10		
Record of Applied and Action Learning	10
