Date:

Applied and Action Learning

(Learning by Doing and Discovery)

Name of the Experiment :

Coding Phase: Pseudo Code / Flow Chart / Algorithm

Open Android Studio

- Launch Android Studio and open your project or create a new one.

Create or Edit the XML Layout File

- In your project's res/layout folder, create or modify an XML file.
- Add a **ListView** element in the layout where you want to display the list.

Go to the Corresponding Activity/Fragment

- Navigate to the .java or .kt file linked to your layout.

Initialize the ListView in Code

- Use `findViewById()` to reference the ListView in your Activity/Fragment.

Create a String Array for Data

- Define an array of items (e.g., fruits, countries, etc.) in your code or in res/values/strings.xml.

Create an ArrayAdapter

- Instantiate an ArrayAdapter by passing the context, layout type (e.g., `android.R.layout.simple_list_item_1`), and your data array.

Set the Adapter to the ListView

- Use `.setAdapter()` to bind the adapter with the ListView.

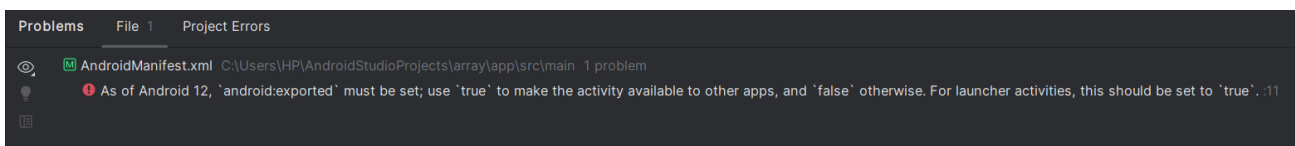

Add Item Click Listener

- Use `.setOnClickListener()` to define what happens when an item is selected.

Run and Test the Application

- Build and run your project to ensure the ListView displays the array data properly.

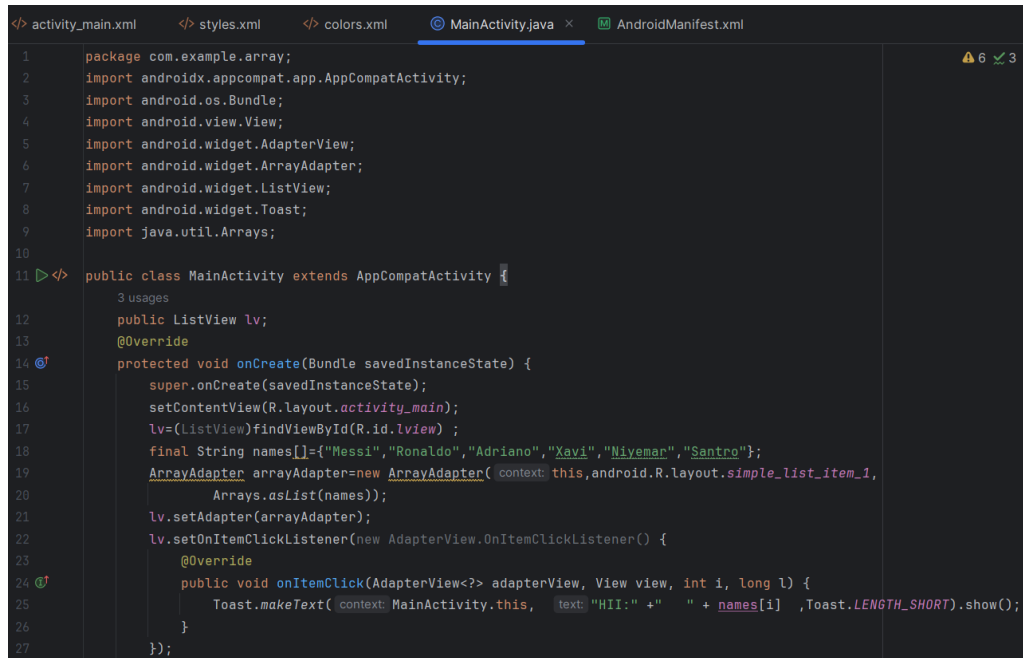

Testing Phase: Compilation of Code (error detection)

Implementation Phase: Final Output(no error)

Step 1: Design the Layout

- Open activity_main.xml from the res → layout folder.

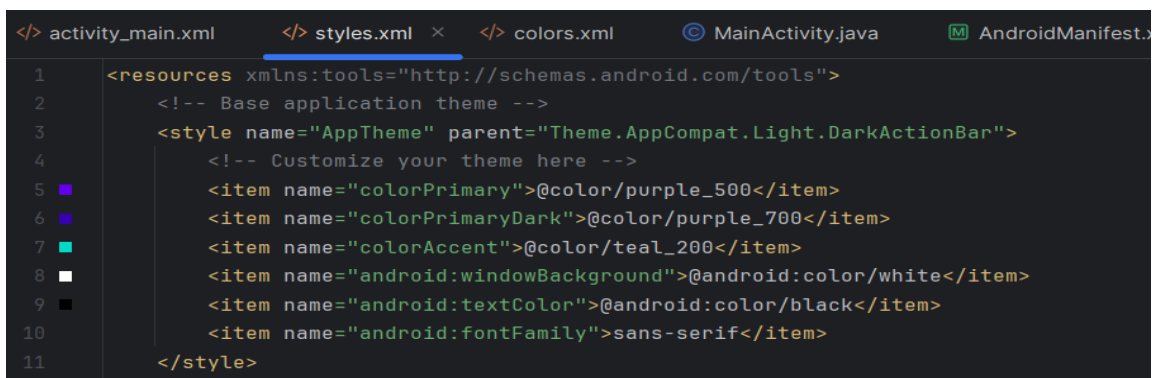

```

1 package com.example.array;
2 import androidx.appcompat.app.AppCompatActivity;
3 import android.os.Bundle;
4 import android.view.View;
5 import android.widget.AdapterView;
6 import android.widget.AdapterView.OnItemClickListener;
7 import android.widget.ArrayAdapter;
8 import android.widget.ListView;
9 import android.widget.Toast;
10 import java.util.Arrays;
11
12 public class MainActivity extends AppCompatActivity {
13     public ListView lv;
14     @Override
15     protected void onCreate(Bundle savedInstanceState) {
16         super.onCreate(savedInstanceState);
17         setContentView(R.layout.activity_main);
18         lv=(ListView)findViewById(R.id.lvview);
19         final String names[]={"Messi","Ronaldo","Adriano","Xavi","Niyemar","Santro"};
20         ArrayAdapter arrayAdapter=new ArrayAdapter<context: this,android.R.layout.simple_list_item_1,
21             Arrays.asList(names));
22         lv.setAdapter(arrayAdapter);
23         lv.setOnItemClickListener(new AdapterView.OnItemClickListener() {
24             @Override
25             public void onItemClick(AdapterView<?> adapterView, View view, int i, long l) {
26                 Toast.makeText(context: MainActivity.this, text: "HII:" + " " + names[i],Toast.LENGTH_SHORT).show();
27             }
28         });
29     }
30 }

```

Configuring styles.xml (For Custom Theme/Style)

Location: res → values → styles.xml

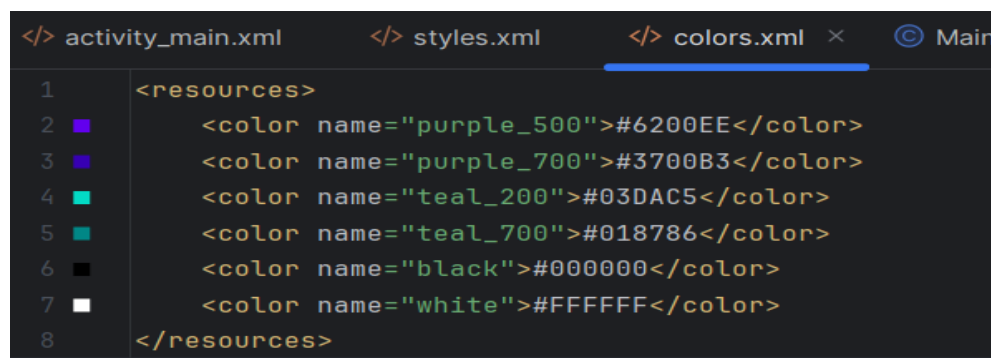

```

1 <?xml version="1.0" encoding="utf-8"?>
2 <resources xmlns:tools="http://schemas.android.com/tools">
3     <!-- Base application theme -->
4     <style name="AppTheme" parent="Theme.AppCompat.Light.DarkActionBar">
5         <!-- Customize your theme here -->
6         <item name="colorPrimary">@color/purple_500</item>
7         <item name="colorPrimaryDark">@color/purple_700</item>
8         <item name="colorAccent">@color/teal_200</item>
9         <item name="android:windowBackground">@android:color/white</item>
10        <item name="android:textColor">@android:color/black</item>
11        <item name="android:fontFamily">sans-serif</item>
12    </style>
13 </resources>

```

Configuring colors.xml (For Custom Theme/colors)

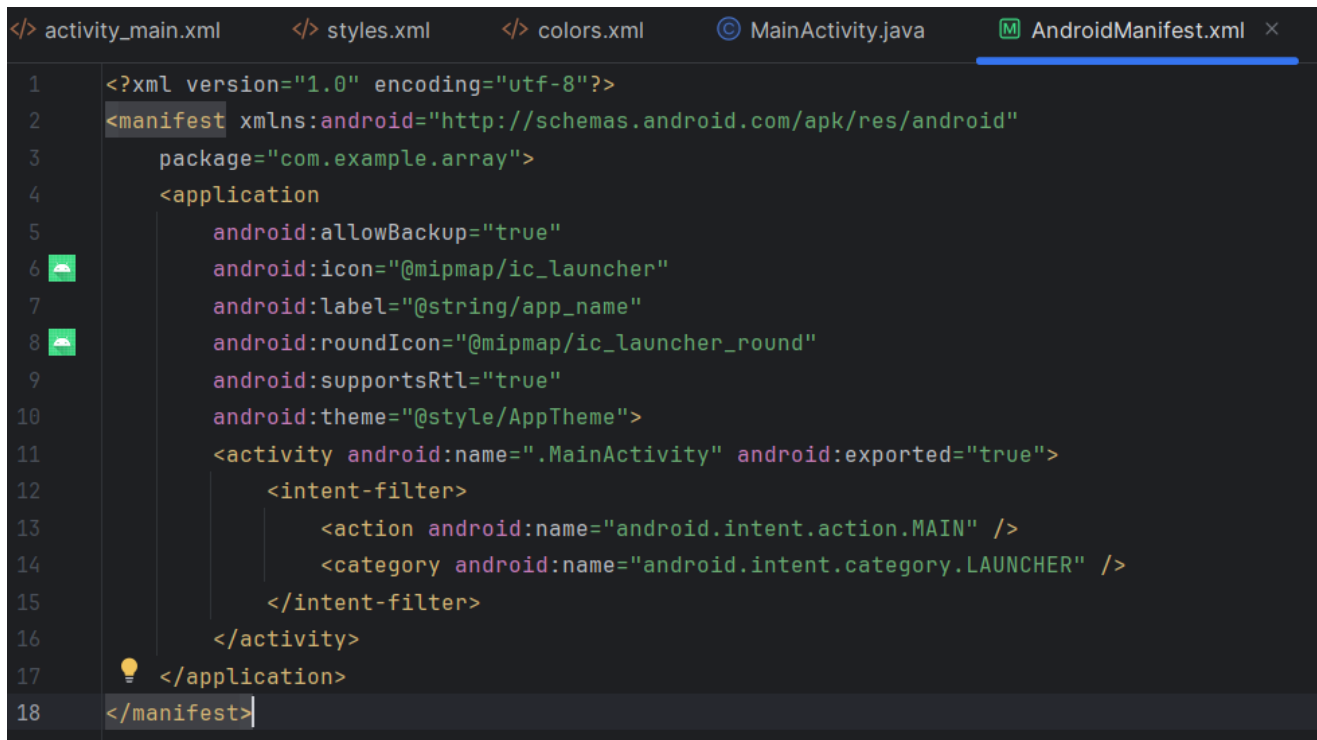

```

1 <?xml version="1.0" encoding="utf-8"?>
2 <resources>
3     <color name="purple_500">#6200EE</color>
4     <color name="purple_700">#3700B3</color>
5     <color name="teal_200">#03DAC5</color>
6     <color name="teal_700">#018786</color>
7     <color name="black">#000000</color>
8     <color name="white">#FFFFFF</color>
9 </resources>

```

Implementation Phase: Final Output(no error)

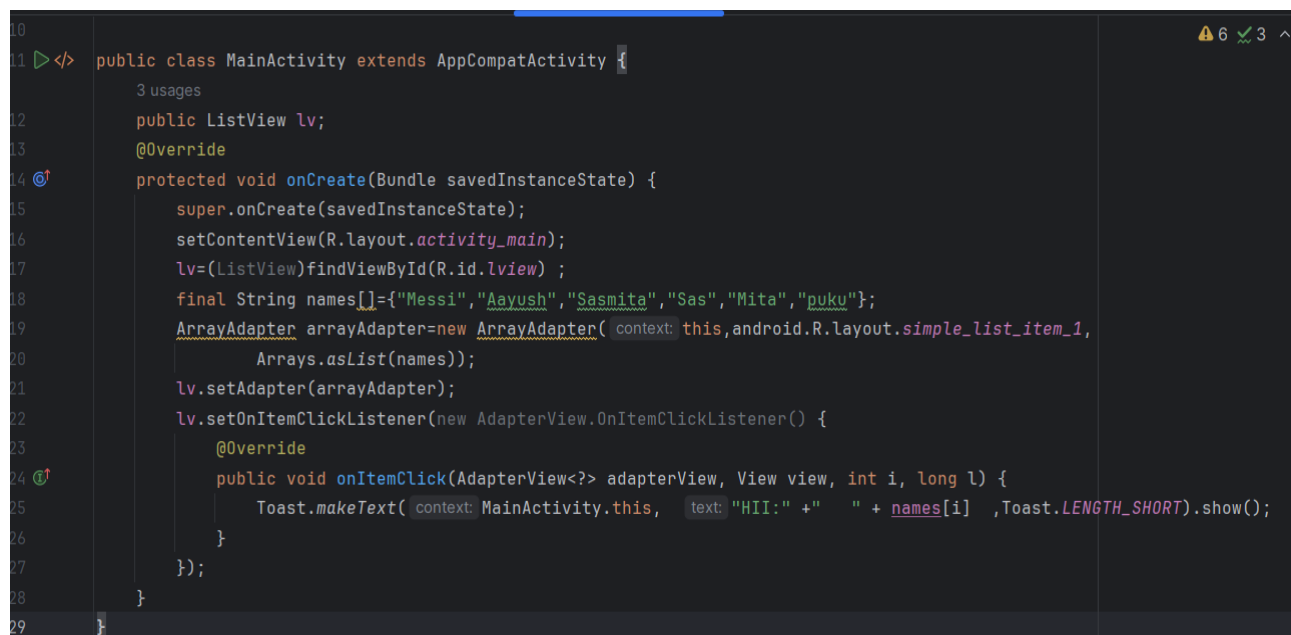

Open AndroidManifest.xml in the app → src → main folder.
add android:exported="true" to the activity tag with an intent filter.

```

1  <?xml version="1.0" encoding="utf-8"?>
2  <manifest xmlns:android="http://schemas.android.com/apk/res/android"
3      package="com.example.array">
4      <application
5          android:allowBackup="true"
6          android:icon="@mipmap/ic_launcher"
7          android:label="@string/app_name"
8          android:roundIcon="@mipmap/ic_launcher_round"
9          android:supportsRtl="true"
10         android:theme="@style/AppTheme">
11         <activity android:name=".MainActivity" android:exported="true">
12             <intent-filter>
13                 <action android:name="android.intent.action.MAIN" />
14                 <category android:name="android.intent.category.LAUNCHER" />
15             </intent-filter>
16         </activity>
17     </application>
18 </manifest>
  
```

Configuring Mainactivity.java

```

10
11 public class MainActivity extends AppCompatActivity {
12     3 usages
13     public ListView lv;
14     @Override
15     protected void onCreate(Bundle savedInstanceState) {
16         super.onCreate(savedInstanceState);
17         setContentView(R.layout.activity_main);
18         lv=(ListView)findViewById(R.id.lvview) ;
19         final String names[]={ "Messi", "Aayush", "Sasmita", "Sas", "Mita", "puku"};
20         ArrayAdapter arrayAdapter=new ArrayAdapter( context: this, android.R.layout.simple_list_item_1,
21             Arrays.asList(names));
22         lv.setAdapter(arrayAdapter);
23         lv.setOnItemClickListener(new AdapterView.OnItemClickListener() {
24             @Override
25             public void onItemClick(AdapterView<?> adapterView, View view, int i, long l) {
26                 Toast.makeText( context: MainActivity.this, text: "HII:" + " " + names[i] ,Toast.LENGTH_SHORT).show();
27             }
28         });
29     }
  
```

Click Run .
